DENNIS EAGLE ADOPT INTEGRATED DRIVER SAFETY AND MANAGEMENT SOLUTION FROM SURECAM

Dennis Eagle, a global leader in the design and manufacture of refuse collection vehicles, has installed advanced dashcams on 112 vans as part of a video-enabled driver protection solution. The fleet and video telematics system from SureCam has been integrated with Peoplesafe's lone worker service to achieve the highest level of safety both in and outside the vehicle for its team of service engineers.

Our main priority is the welfare of our service engineers when they are working remotely and at high-risk locations," explains Dave Nicholls, Service Operations Manager at Dennis Eagle. "By bringing together our vehicle camera, tracking, driver behaviour and lone worker protection requirements into an integrated technology solution, we can safeguard our team, while achieving a host of secondary efficiency, productivity and cost improvements.

Dennis Eagle undertook an initial trial at two sites for 28 service engineers to measure the effectiveness of the integrated telematics solution. The company has since rolled out the technology to 112 vans, made-up of maintenance and breakdown response vehicles, that operate nationwide from a network of 18 sites. Each Depot Manager receives video upload alerts of collisions, near misses and harsh driving events, with scheduled reports providing an overview of driver behaviour performance. Meanwhile, the operations team is using location-based data to better coordinate and respond to customer maintenance needs.

PEOPLESAFE INTEGRATION

The integration with Peoplesafe's lone worker service provides drivers with a quick and easy way to request assistance. When an alert is raised, controllers at the alarm receiving centre (ARC) can access audio communication and incident data, along with supporting video footage captured from the dashcams. The added audio and visual insight ensures that Dennis Eagle can proactively manage any emergency situation, taking the most appropriate action, with immediate access to emergency services if required.

ABOUT SURECAM

SureCam is a global leader in video safety for fleets. We believe every fleet, from 5 vehicles to 5,000 should have real-time visibility into what is happening on the road. Our network-connected cameras and cloud-based software protect fleets from false driving allegations and are the first line of defence against rising claims costs. We work with clients to customise each fleet's configurations, providing visibility into the incidents and driving behaviour you care about while filtering out the noise. SureCam is trusted by some of the most recognised fleets in transportation, distribution, utilities, construction, taxi, field services and home delivery.

"We have created a video-enabled telematics ecosystem, underpinned by our industry-leading dashcam solutions, that brings together complementary products and systems to streamline fleet management while mitigating the impact of vehicle and driver risk. Dennis Eagle is the latest fleet operator to take advantage of this comprehensive range of integrated technologies, working closely with us and Peoplesafe to overcome the safety and operational challenges they face."

ABOUT PEOPLESafe

Peoplesafe is the leading provider of employee protection services in the UK. It partners with public and private sector organisations to ensure their employees are safe as they do their job. Peoplesafe has 20 years' experience in providing state of the art technology, and innovative systems to help employers carry out their duty of care to protect employees. Employees in the Peoplesafe network are supported round the clock by an in-house team of Alarm Receiving Centre (ARC) Controllers who answer and monitor alarms raised through personal safety devices and apps. Peoplesafe's service is fully accredited, complies with the National Policy Chief Council's security system policy and keeps employee data secure.

"We have been using vehicle tracking and lone worker technologies for a number of years, but we have now recognised the huge potential of an all-in-one, video-enabled solution to enhance driver protection and management. The support we have received from SureCam has been first rate, which has made the entire process from trial through to full roll-out simple and stress free. We are now focusing on embedding the solution into our operation, so we can make the most of the genuine opportunities it provides,"

Dave Nicholls, Service Operations Manager at Dennis Eagle.
